

List of DACVSMR and MANZCVS Sports Medicine and Rehabilitation Veterinarians

Compiled August 2026

A Diplomate of the American College of Veterinary Sports Medicine and Rehabilitation

Veterinarian (DACVSMR) is a board-certified specialist who focuses entirely on animal mobility, injury recovery, and athletic performance. This title means they are an elite expert in helping animals move without pain, recover from injuries, and stay in peak physical condition

What is a DACVSMR Specialist?

- **Board-Certified Expert:** They are a Diplomate of the American College of Veterinary Sports Medicine and Rehabilitation (ACVSMR).
- **Elite Training:** They have completed a rigorous multi-year residency and passed comprehensive board examinations.
- **Global Standard:** This credential represents the highest international standard of specialization in veterinary sports medicine.

How they can help:

- **Advanced Diagnostics:** Using specialized tools to diagnose causes of complex lameness, muscle, ligament and tendon injuries.
- **Custom Rehabilitation:** Designing evidence-based physical therapy plans for post-operative recovery or injury healing.
- **Performance Longevity:** Structuring tailored conditioning, nutrition, and injury-prevention plans for athletes and companion animals.
- **Chronic Pain Management:** Utilizing innovative therapies to restore comfort and quality of life for conditions like arthritis.

An ANZCVS Sports Medicine and Rehabilitation Member Veterinarian (MANZCVS) is a general practice vet who has achieved formal, advanced recognition in animal mobility, injury recovery, and physical conditioning.

What is an ANZCVS Member (MANZCVS)?

- **Rigorous Qualification:** They have passed extensive postgraduate examinations through the Australian and New Zealand College of Veterinary Scientists (ANZCVS).
- **Primary Care Experts:** Unlike a specialist, a Member is often your primary care vet, bringing elite sports medicine directly to your regular appointments.
- **Proven Expertise:** This credential proves they possess advanced knowledge well beyond standard veterinary training.

How they can help:

- **Injury Recovery:** They design targeted physical rehabilitation plans after surgeries or soft-tissue injuries.
- **Mobility Support:** They specialize in advanced pain management for chronic conditions like osteoarthritis.
- **Athletic Conditioning:** They optimize fitness and prevent injuries in working, sporting, and active companion animals.

Australian Capital Territory

- *Specialist* Dr Ah Young Kim DVM, MS, CCRT, CVA, DACVSMR

Board Certified Specialist, Diplomate of the American College of Veterinary Sports Medicine and Rehabilitation (Canine)

Contact details:
